

May flower

Fleur de Mai

Sko'trigus'uwiwas'awe'kctc

*Epigea repens*

Mayflowers begin blooming in late April in southern NB, by mid May they are also blooming in northern NB. The plants creep along the ground over poor soil and are recognized as a poor soil indicator by Natural Resources Canada. The pink or white flowers have a sweet fragrance that unfortunately make the plant a favourite Mother's Day bouquet at spring markets.
