

Rhodora

Rhodendron du Canada

Rhododendron canadense

previous years
seed pods

Rhodora is a perennial shrub that grows in wet acidic meadows, bogs, roadsides and forest clearings. The purple/magenta flowers appear in June before the leaves appear. These flowers provide a source of nectar for humming birds, butterflies and bees. Rhodora is native to north Eastern North America. The beauty of this plant was inspirational to poets Emerson and Dickinson. All parts of these shrubs are toxic when eaten.
